All information contained in these materials, including products and product specifications, represents information on the product at the time of publication and is subject to change by Renesas Electronics Corp. without notice. Please review the latest information published by Renesas Electronics Corp. through various means, including the Renesas Electronics Corp. website (<http://www.renesas.com>).

# CONFIDENTIAL

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
  2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
  3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
  4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
  5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.  
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.  
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.  
Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
  6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
  7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
  8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
  9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
  10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
  11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
  12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

# How to Use This Manual

## 1. Purpose and Target Readers

This manual is designed to provide the user with an understanding the functions of DISCOM driver. This manual is written for engineers who use DISCOM driver.

Particular attention should be paid to the precautionary notes when using the manual. These notes occur within the body of the text, at the end of each section, and in the Usage Notes section.

The revision history summarizes the locations of revisions and additions. It does not list all revisions. Refer to the text of the manual for details.

Please refer to documents of drivers and hardware for a target system implementing DISCOM as necessary.

The following documents are related documents. Make sure to refer to the latest versions of these documents.

Document Type	Description	Document Title	Document No.

## 2. Notation of Numbers and Symbols

This manual uses the following notation.

Binary 0bXXXXXXXX (X=0 or 1)  
Decimal XXX (X=0-9)  
Hex 0xXXXXXXXX (X=0-9,A-F)

## CONFIDENTIAL

### 3. List of Abbreviations and Acronyms

Abbreviation	Full Form
API	Application Programming Interface
CRC	Cyclic Redundancy Check.
DISCOM	Display Output Comparator
ECM	Error Control Module
H/W	Hardware
VDCE	Video Data Controller E. This is H/W, which controls video input, image synthesis and video output.
VOCA	Video Output Checker A

## Renesas Graphics Library Display Output Comparator (DISCOM) Driver

---

5.3	Enumerated Type .....	41
5.3.1	r_discom_Error_t .....	41
5.3.2	r_discom_Alpha_t .....	42
5.4	Structure Type .....	43
5.4.1	r_discom_Param_t .....	43

## 2. Overview

### 2.1 Feature and Scope

The DISCOM driver checks whether the data output from the VDCE agrees with the expected graphics data. The DISCOM driver is only available for the RH850/D1Mx RGL package.

### 2.2 Component Structure

The component structure of DISCOM is shown in [Figure 2-1](#).

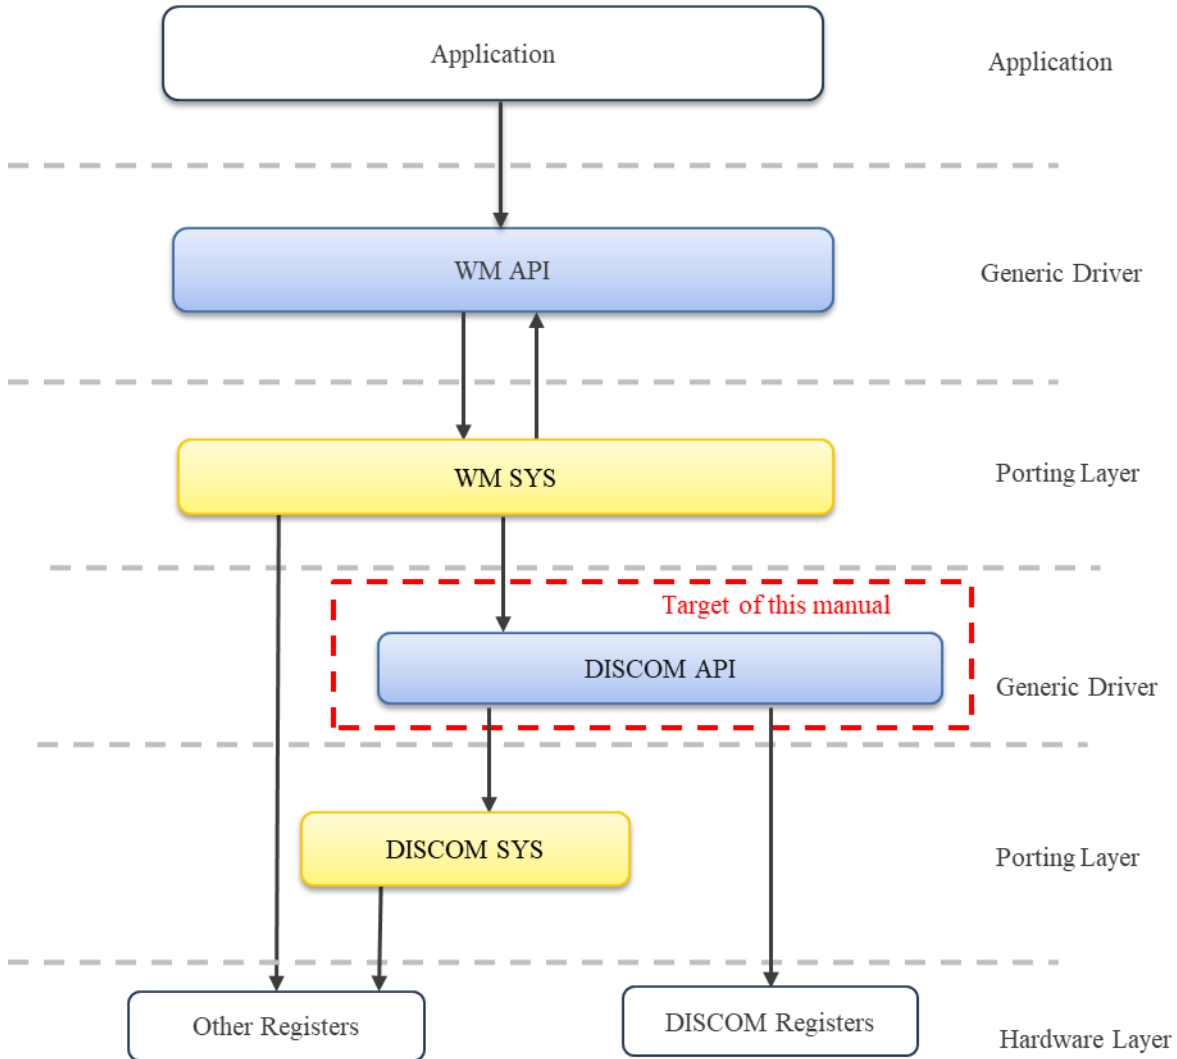

Figure 2-1 Component Structure

For the details of the API, please refer to [Chapter 4](#).

## 3. Basic Specification

### 3.1 Summary Specification

The summary of specification is described in [Table 3-1](#).

**Table 3-1 Summary Specification**

Items	Description
Target LSI	RH850/D1M1(H), RH850/D1M1-V2, RH850/D1M1A, RH850/D1M2(H)
Main Feature	<ul style="list-style-type: none"><li>The CRC code of the graphics data obtained after alpha blending in the graphics display module can be compared with the expected CRC code.</li><li>The rectangular area can be specified based on the graphics data output from the graphics display module and its CRC code can be compared with the expected CRC code.</li><li>Pixel format: 32-bit ARGB888 with fixed A = FF<sub>H</sub></li><li>CRC is calculated from most significant byte (MSB) to least significant byte (LSB)</li></ul>
Semaphore / Mutex	N/A. This can be implemented with porting layer.
Interrupts	Interrupts can be obtained via ECM. For more details please see <a href="#">section 3.3</a> .

### 3.2 Reserved Word

DISCOM uses the following prefixes for avoiding confusion from other software. Prefixes of DISCOM is described in [Table 3-2](#).

**Table 3-2 Prefixes**

Prefix	Description
R_DISCOM_*	Prefix for DISCOM Module
r_discom_*	

### 3.3 Interrupt Handler List

The DISCOM interrupts are notified via the Error Control Module (ECM).

The DISCOM interrupts are logically OR combined with VOCA interrupt outputs and input to INTVOCAERR of the ECM.

**Table 3-3 Interrupt Handler List**

No.	Interrupt Name	Description
(1)	INTVOCAERR	Logically OR combination of VOCA and DISCOM error signals.

## **3.4 Error Handling**

### **3.4.1 Return code**

DISCOM driver has 4 types of error codes.

#### **3.4.1.1 Parameter level**

Following errors occur by a cause such as abnormality of parameter. In this case, please set valid parameter again.

- R\_DISCOM\_ERR\_PARAM\_INCORRECT
- R\_DISCOM\_ERR\_RANGE\_UNIT
- R\_DISCOM\_ERR\_RANGE\_PARAM

#### **3.4.1.2 Timing level**

Following errors occur by a cause such as abnormality of execution timing. In this case, please call again after changing to valid state or timing.

- R\_DISCOM\_ERR\_NOT\_ACCEPTABLE

#### **3.4.1.3 System level**

Following errors occur by a cause such as OS dependent error (e.g. system call error, resource shortage). In this case, please do recovery processing from a system layer, because this status cannot be restored only in this library.

- R\_DISCOM\_ERR\_FATAL\_OS

#### **3.4.1.4 Hardware level**

Following errors occur when unexpected error occurs internally. In this case, please reset the RH850/D1x device.

- R\_DISCOM\_ERR\_FATAL\_HW

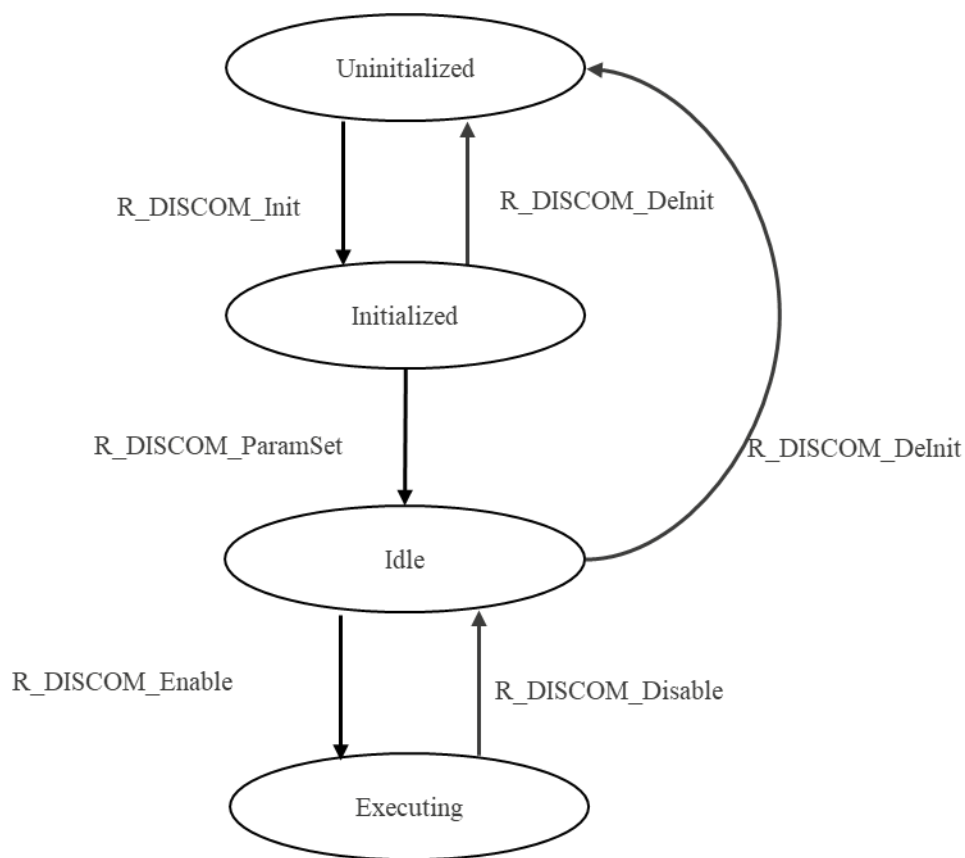

### 3.5 State Transition

Each DISCOM unit has following status.

**Table 3-4 DISCOM unit State Details**

No.	State Name	Description
(1)	Uninitialized	Specifies that the DISCOM driver is not initialized.
(2)	Initialized	Specifies that the DISCOM driver is initialized.
(3)	Idle	Specifies that the configuration for CRC compare has been set.
(4)	Executing	Specifies that CRC compare operation is enabled.

The image describes state transition.

**Figure 3-1 State Transition Diagram of DISCOM driver**

## CONFIDENTIAL

Table 3-5 State Transition Table of DISCOM unit

Function Name	State			
	Uninitialized	Initialized	Idle	Executing
R_DISCOM_Init	OK	NG	NG	NG
R_DISCOM_DeInit	OK	OK	OK	NG
R_DISCOM_ErrorCallbackSet	NG	OK	OK	OK
R_DISCOM_ParamSet	NG	OK	OK	NG
R_DISCOM_Enable	NG	NG	OK	OK
R_DISCOM_Disable	NG	OK	OK	OK
R_DISCOM_StatusGet	NG	OK	OK	OK
R_DISCOM_StatusClear	NG	OK	OK	OK
R_DISCOM_CrcSet	NG	OK	OK	OK
R_DISCOM_CrcGet	NG	OK	OK	OK
R_DISCOM_VersionStringGet	OK	OK	OK	OK
R_DISCOM_MacroVersionGet	OK	OK	OK	OK
R_DISCOM_IntEnable	NG	OK	OK	OK
R_DISCOM_IntDisable	NG	OK	OK	OK

## 4.Function Description

### 4.1 Fundamental Concepts

#### 4.1.1 DISCOM unit

RH850/D1x device has the following number of units of the DISCOM.

**Table 4-1 Number of units**

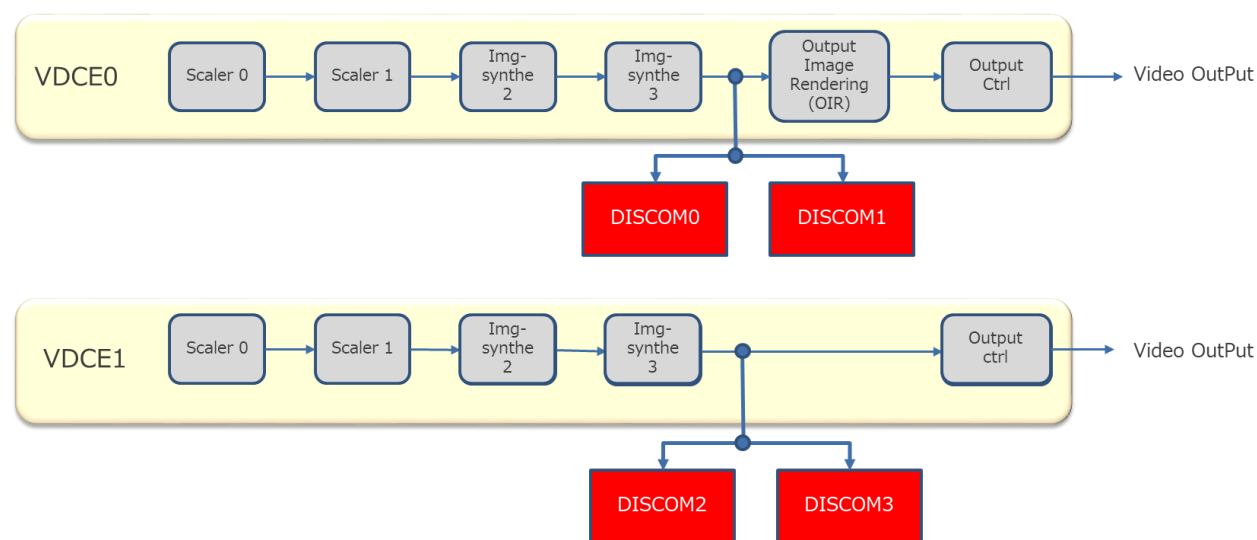

Feature	RH850/D1x Device Name		
	D1L2(H)	D1M1(H), D1M1-V2	D1M1A, D1M2(H)
DISCOM Units	0	2	4
Unit indexes	None	DISCOM0 to DISCOM1	DISCOM0 to DISCOM3

Almost DISCOM API functions have the argument “Unit”.

User specifies the DISCOM H/W unit number to be controlled. The range is 0 to 3.

#### 4.1.2 Target comparison data

The DISCOM compares the CRC code of the data output in the arbitrary rectangular area of graphics data and the pre-calculated CRC code of the expected graphics data. The timing of the data to be compared can be checked after alpha blending.

**Figure 4-1 Target comparison data**

**4.1.3 Pixel Format**

The pixel format of arbitrary rectangular area of the selected graphics data sets only 32-bit ARGB8888 (A=0xFF fixed).

**4.1.4 CRC Calculation method**

The DISCOM gets the result of the CRC code. The CRC code is generated a 32-bit CRC code by using the following CRC polynomial (IEEE802.3).

$$x^{32} + x^{26} + x^{23} + x^{22} + x^{16} + x^{12} + x^{11} + x^{10} + x^8 + x^7 + x^5 + x^4 + x^2 + x + 1$$

CRC is sequentially calculated beginning with LSB in pixel units.

It is calculated in units of 32 bits.

The initialization value of CRC code is 0xFFFFFFFF.

## 4.2 Using the API

### 4.2.1 Initialization / De-Initialization

R\_DISCOM\_Init initializes the driver and the hardware as far as necessary. The Unit parameter holds a number that specifies the DISCOM unit number being initialized. This function initializes the Error Callback function. R\_DISCOM\_DeInit function de-initializes the driver and the hardware as far as necessary.

### 4.2.2 Rectangular Area

The R\_DISCOM\_ParamSet sets the start position, the size and the alpha value of the rectangular area for which the CRC code is calculated in r\_discom\_Param\_t structure.

**Figure 4-2 Rectangular Area**

### 4.2.3 Expected CRC code

R\_DISCOM\_CrcSet specifies the pre-calculated expected CRC code value.  
See 4.1.4 about CRC Calculation method.

### 4.2.4 The Display Output Comparison Enable / Disable

R\_DISCOM\_Enable calculates the CRC code of the arbitrary rectangular area of graphics data and compares with the pre-calculated expected CRC code value.

The result of CRC code comparison can be got by using R\_DISCOM\_StatusGet.

R\_DISCOM\_Disable ends the display output calculation and comparison.

### 4.3 Device difference

The following table shows the function differences depending on the device.

**Table 4-2 APIs supported by DISCOM driver**

Feature	RH850/D1x Device Name	
	D1L2(H)	D1M1(H), D1M1-V2, D1M1A, D1M2(H)
All API of DISCOM driver	No	Full

The following table shows units difference depending on the device.

**Table 4-3 Units**

Feature	RH850/D1x Device Name	
	D1M1(H), D1M1-V2	D1M1A, D1M2(H)
DISCOM Units	2	4
Unit indexes	DISCOM0 to DISCOM1	DISCOM0 to DISCOM3

### 4.4 Header File List

**Table 4-4 Header File List**

No.	Header File Name	Description
(1)	r_discom_api.h	Header file for DISCOM API.
(2)	r_typedefs.h	Header file for predefined data types.

## 5.Functions

### 5.1 Function List

This section describes about the DISCOM API functions which are in [Table 5-1](#) and executable state of each function is described in the specification of each function.

**Table 5-1 List of DISCOM API Functions**

Function Name	Purpose
<a href="#"><i>R_DISCOM_Init</i></a>	This function initializes the driver and the hardware as far as necessary.
<a href="#"><i>R_DISCOM_DeInit</i></a>	This function de initializes the driver and the hardware.
<a href="#"><i>R_DISCOM_ErrorCallbackSet</i></a>	This function de initializes the driver and the hardware.
<a href="#"><i>R_DISCOM_ParamSet</i></a>	This function sets the information of DISCOM configuration parameters.
<a href="#"><i>R_DISCOM_Enable</i></a>	This function enables the display output comparison start.
<a href="#"><i>R_DISCOM_Disable</i></a>	This function disables the display output comparison start.
<a href="#"><i>R_DISCOM_StatusGet</i></a>	This function gets the compare result of the CRC code.
<a href="#"><i>R_DISCOM_StatusClear</i></a>	This function clears the compare result of the CRC code.
<a href="#"><i>R_DISCOM_CrcSet</i></a>	This function sets the expectation value of the CRC code.
<a href="#"><i>R_DISCOM_CrcGet</i></a>	This function gets the current value of the CRC code.
<a href="#"><i>R_DISCOM_VersionStringGet</i></a>	This function returns the version string of this DISCOM driver.
<a href="#"><i>R_DISCOM_MacroVersionGet</i></a>	This function returns the major and minor version of the H/W macro.
<a href="#"><i>R_DISCOM_IntEnable</i></a>	This function enables the specified DISCOM interrupt.
<a href="#"><i>R_DISCOM_IntDisable</i></a>	This function disables the specified DISCOM interrupt.

## 5.2 DISCOM API Functions

This chapter describes the application interface functions, which are required for general use of the driver.

### 5.2.1 Basic functions

The section describes driver functions, which are required for general use of the driver, but which are related to a specific functionality of the macro itself.

#### 5.2.1.1 R\_DISCOM\_Init

##### Function Prototypes

```
r_discom_Error_t R_DISCOM_Init(const uint32_t Unit)
```

##### Input Parameter

Table 5-2 Input parameter of R\_DISCOM\_Init

Parameter	Description
Unit	Specifies the DISCOM unit number.

##### Input-Output Parameter

None

##### Output Parameter

None

### Return Codes

R_DISCOM_ERR_OK	- No error occurred.
R_DISCOM_ERR_RANGE_UNIT	- The unit-number was outside the range.
R_DISCOM_ERR_NOT_ACCEPTABLE	- A function was called in an incorrect state.
R_DISCOM_ERR_FATAL_OS	- Fatal error has occurred at OS interface.
R_DISCOM_ERR_FATAL_HW	- Fatal error has occurred at H/W.

### Description

This function initializes the driver and the hardware as far as necessary.  
DISCOM unit status will become Initialized state after the execution of this function.

### Reentrancy

Non-reentrant

If user implements following functions to prevent multiple executions, this function will become re-entrant.

- R\_DISCOM\_Sys\_Lock
- R\_DISCOM\_Sys\_Unlock

### Sync/Async

Synchronous

### Call from Interrupt

Prohibited.

### Preconditions

See [Table 3-5](#) about DISCOM unit status conditions.

### See also

r\_discom\_Error\_t

**5.2.1.2 R\_DISCOM\_DeInit****Function Prototypes**

```
r_discom_Error_t R_DISCOM_DeInit(const uint32_t      Unit)
```

**Input Parameter****Table 5-3 Input parameter of R\_DISCOM\_DeInit**

Parameter	Description
Unit	Specifies the DISCOM unit number.

**Input-Output Parameter**

None

**Output Parameter**

None

**Return Codes**

R_DISCOM_ERR_OK	- No error occurred.
R_DISCOM_ERR_RANGE_UNIT	- The unit-number was outside the range.
R_DISCOM_ERR_NOT_ACCEPTABLE	- A function was called in an incorrect state.
R_DISCOM_ERR_FATAL_OS	- Fatal error has occurred at OS interface.

**Description**

This function de-initializes the driver and the hardware.

DISCOM unit status will become Uninitialized state after executing this function.

If DISCOM unit is already de-initialized status, this function does nothing and returns R\_DISCOM\_ERR\_OK

### Reentrancy

Non-reentrant as default.

If user implements following functions to prevent multiple executions, this function will become re-entrant.

- R\_DISCOM\_Sys\_Lock
- R\_DISCOM\_Sys\_Unlock

### Sync/Async

Synchronous

### Call from Interrupt

Prohibited.

### Preconditions

See [Table 3-5](#) about DISCOM unit status conditions.

### See also

r\_discom\_Error\_t

### 5.2.1.3 R\_DISCOM\_ErrorCallbackSet

#### Function Prototypes

```
r_discom_Error_t R_DISCOM_ErrorCallbackSet (const uint32_t Unit,
                                             void(*const errorCallback)(const uint32_t Unit,
                                             const r_discom_Error_t Error))
```

#### Input Parameter

**Table 5-4 Input parameter of R\_DISCOM\_ErrorCallbackSet**

Parameter	Description
Unit	Specifies the DISCOM unit number.
ErrorCallback	Specifies a function that is called in case an error occurred. Set R_NULL if callback is uninstalled.

**Table 5-5 Output parameter of R\_DISCOM\_ErrorCallbackSet**

Parameter	Description
Unit	DISCOM unit number where the error occurred.
Error	Error type.

#### Input-Output Parameter

None

#### Output Parameter

None

#### Return Codes

R\_DISCOM\_ERR\_OK - No error occurred.  
R\_DISCOM\_ERR\_NOT\_ACCEPTABLE - A function was called in an incorrect state.  
R\_VDCE\_ERR\_FATAL\_OS - Fatal error has occurred at OS interface.

#### Description

This function sets a callback function that is called in case of an error.  
Error notified in this callback can be checked also by return value of each API function, so use of callback is not mandatory. The error callback is global for all DISCOM units.  
The error callback is notified during the DISCOM unit is not Uninitialized state.  
The installed error callback can be uninstalled by R\_NULL setting in this function. And all DISCOM units are de-initialized by R\_DISCOM\_DeInit, the callback is also uninstalled.

### Reentrancy

Non-reentrant as default.

If user implements following functions to prevent multiple executions, this function will become re-entrant.

- R\_DISCOM\_Sys\_Lock
- R\_DISCOM\_Sys\_Unlock

### Sync/Async

Synchronous

### Call from Interrupt

Prohibited.

### Preconditions

See [Table 3-5](#) about DISCOM unit status conditions.

### See also

r\_discom\_Error\_t

**5.2.1.4 R\_DISCOM\_ParamSet****Function Prototypes**

```
r_discom_Error_t R_DISCOM_ParamSet(const uint32_t          Unit,
                                   const r_discom_Param_t  *const Param)
```

**Input Parameter****Table 5-6 Input parameter of R\_DISCOM\_ParamSet**

Parameter	Description
Unit	Specifies the DISCOM unit number.
Param	Specifies the DISCOM configuration parameter.

**Input-Output Parameter**

None

**Output Parameter**

None

**Return Codes**

R_DISCOM_ERR_OK	- No error occurred.
R_DISCOM_ERR_RANGE_UNIT	- The unit-number was outside the range.
R_DISCOM_ERR_RANGE_PARAM	- A parameter was outside the range.
R_DISCOM_ERR_PARAM_INCORRECT	- Parameter was incorrect.
R_DISCOM_ERR_NOT_ACCEPTABLE	- A function was called in an incorrect state.
R_DISCOM_ERR_FATAL_OS	- Fatal error has occurred at OS interface.
R_DISCOM_ERR_FATAL_HW	- Fatal error has occurred at H/W.

**Description**

This function sets the information of DISCOM configuration parameters.

This function returns R\_DISCOM\_ERR\_OK if successful.

**Reentrancy**

Non-reentrant as default.

If user implements following functions to prevent multiple executions, this function will become re-entrant.

- R\_DISCOM\_Sys\_Lock
- R\_DISCOM\_Sys\_Unlock

**Sync/Async**

Synchronous

**Call from Interrupt**

Prohibited.

### Preconditions

See [Table 3-5](#) about DISCOM unit status conditions.

### See also

r\_discom\_Error\_t  
r\_discom\_Param\_t

### 5.2.1.5 R\_DISCOM\_Enable

#### Function Prototypes

```
r_discom_Error_t R_DISCOM_Enable(const uint32_t Unit)
```

#### Input Parameter

Table 5-7 Input parameter of R\_DISCOM\_Enable

Parameter	Description
Unit	Specifies the DISCOM unit number.

#### Input-Output Parameter

None

#### Output Parameter

None

#### Return Codes

R_DISCOM_ERR_OK	- No error occurred.
R_DISCOM_ERR_RANGE_UNIT	- The unit-number was outside the range.
R_DISCOM_ERR_NOT_ACCEPTABLE	- A function was called in an incorrect state.
R_DISCOM_ERR_FATAL_OS	- Fatal error has occurred at OS interface.

#### Description

This function enables the display output comparison start.  
If the function successfully executes, the return code will be R\_DISCOM\_ERR\_OK.  
DISCOM unit status will become Executing state after the execution of this function.

#### Reentrancy

Non-reentrant as default.  
If user implements following functions to prevent multiple executions, this function will become re-entrant.

- R\_DISCOM\_Sys\_Lock
- R\_DISCOM\_Sys\_Unlock

#### Sync/Async

Synchronous

#### Call from Interrupt

Prohibited.

#### Preconditions

See [Table 3-5](#) about DISCOM unit status conditions.

`r_discom_Error_t`

**5.2.1.6 R\_DISCOM\_Disable****Function Prototypes**

```
r_discom_Error_t R_DISCOM_Disable(const uint32_t Unit)
```

**Input Parameter****Table 5-8 Input parameter of R\_DISCOM\_Disable**

Parameter	Description
Unit	Specifies the DISCOM unit number.

**Input-Output Parameter**

None

**Output Parameter**

None

**Return Codes**

R_DISCOM_ERR_OK	- No error occurred.
R_DISCOM_ERR_RANGE_UNIT	- The unit-number was outside the range.
R_DISCOM_ERR_NOT_ACCEPTABLE	- A function was called in an incorrect state.
R_DISCOM_ERR_FATAL_OS	- Fatal error has occurred at OS interface.

**Description**

This function disables the display output comparison.

If the function successfully executes, the return code will be R\_DISCOM\_ERR\_OK.

DISCOM unit status will become Idle state after the execution of this function.

**Reentrancy**

Non-reentrant as default.

If user implements following functions to prevent multiple executions, this function will become re-entrant.

- R\_DISCOM\_Sys\_Lock
- R\_DISCOM\_Sys\_Unlock

**Sync/Async**

Synchronous

**Call from Interrupt**

Prohibited.

**Preconditions**

See [Table 3-5](#) about DISCOM unit status conditions.

**5.2.1.7 R\_DISCOM\_StatusGet****Function Prototypes**

```
r_discom_Error_t R_DISCOM_StatusGet(const uint32_t Unit,  
                                     uint32_t *const State)
```

**Input Parameter****Table 5-9 Input parameter of R\_DISCOM\_StatusGet**

Parameter	Description
Unit	Specifies the DISCOM unit number.

**Input-Output Parameter**

None

**Output Parameter****Table 5-10 Output parameter of R\_DISCOM\_StatusGet**

Parameter	Description
State	Specified the pointer to the compare result of the CRC code. 0 : Compared CRC codes match. 1 : Compared CRC codes do not match

**Return Codes**

R_DISCOM_ERR_OK	- No error occurred.
R_DISCOM_ERR_RANGE_UNIT	- The unit-number was outside the range.
R_DISCOM_ERR_PARAM_INCORRECT	- Parameter was incorrect.
R_DISCOM_ERR_NOT_ACCEPTABLE	- A function was called in an incorrect state.
R_DISCOM_ERR_FATAL_OS	- Fatal error has occurred at OS interface.

**Description**

This function gets the compare result of the CRC code.

The compare result of the CRC code can be got after the end of the valid period of Display area.

See RH850/D1L/D1M Group User's Manual: Hardware for the detail about the timing of the compare result of the CRC code.

**Reentrancy**

Reentrant.

**Sync/Async**

Synchronous

### Call from Interrupt

Permitted.

### Preconditions

See [Table 3-5](#) about DISCOM unit status conditions.

### See also

r\_discom\_Error\_t

**5.2.1.8 R\_DISCOM\_StatusClear****Function Prototypes**

```
r_discom_Error_t R_DISCOM_StatusClear(const uint32_t Unit)
```

**Input Parameter****Table 5-11 Input parameter of R\_DISCOM\_StatusClear**

Parameter	Description
Unit	Specifies the DISCOM unit number.

**Input-Output Parameter**

None

**Output Parameter**

None

**Return Codes**

R_DISCOM_ERR_OK	- No error occurred.
R_DISCOM_ERR_RANGE_UNIT	- The unit-number was outside the range.
R_DISCOM_ERR_NOT_ACCEPTABLE	- A function was called in an incorrect state.
R_DISCOM_ERR_FATAL_OS	- Fatal error has occurred at OS interface.
R_DISCOM_ERR_FATAL_HW	- Fatal error has occurred at H/W.

**Description**

This function clears the compare result of the CRC code.  
This function processes the error interrupt factor of DISCOM.

**Reentrancy**

Non-reentrant.  
This function doesn't call R\_DISCOM\_Sys\_Lock and R\_DISCOM\_Sys\_Unlock.  
User should control not to re-enter the same DISCOM unit.

**Sync/Async**

Synchronous

**Call from Interrupt**

Permitted.

**Preconditions**See [Table 3-5](#) about DISCOM unit status conditions.

**See also**

r\_discom\_Error\_t

**5.2.1.9 R\_DISCOM\_CrcSet****Function Prototypes**

```

r_discom_Error_t R_DISCOM_CrcSet(const uint32_t    Unit,
                                   const uint32_t    Crc,
                                   const uint32_t    Flags)

```

**Input Parameter****Table 5-12 Input parameter of R\_DISCOM\_CrcSet**

Parameter	Description
Unit	Specifies the DISCOM unit number.
Crc	Specifies the Expected CRC code value of the selected graphics data of rectangular area.
Flags	It specifies the Display Output comparison period flags. See <a href="#">Table 6-3</a> .

**Input-Output Parameter**

None

**Output Parameter**

None

**Return Codes**

R_DISCOM_ERR_OK	- No error occurred.
R_DISCOM_ERR_RANGE_UNIT	- The unit-number was outside the range.
R_DISCOM_ERR_PARAM_INCORRECT	- Parameter was incorrect.
R_DISCOM_ERR_NOT_ACCEPTABLE	- A function was called in an incorrect state.
R_DISCOM_ERR_FATAL_OS	- Fatal error has occurred at OS interface.
R_DISCOM_ERR_FATAL_HW	- Fatal error has occurred at H/W.

**Description**

This function sets the expectation value of the CRC code.  
 If the function successfully executes, the return code will be R\_DISCOM\_ERR\_OK.  
 See [4.1.4](#) about CRC Calculation method.

**Reentrancy**

Non-reentrant as default.  
 If user implements following functions to prevent multiple executions, this function will become re-entrant.

- R\_DISCOM\_Sys\_Lock
- R\_DISCOM\_Sys\_Unlock

**Sync/Async**

Synchronous

**Call from Interrupt**

Prohibited.

### Preconditions

                                uint32_t    *const Crc)
```

**Input Parameter****Table 5-13 Input parameter of R\_DISCOM\_CrcGet**

Parameter	Description
Unit	Specifies the DISCOM unit number.

**Input-Output Parameter**

None

**Output Parameter****Table 5-14 Output parameter of R\_DISCOM\_CrcGet**

Parameter	Description
Crc	Specified the pointer to the current CRC code value of the selected graphics data of rectangular area.

**Return Codes**

R_DISCOM_ERR_OK	- No error occurred.
R_DISCOM_ERR_RANGE_UNIT	- The unit-number was outside the range.
R_DISCOM_ERR_PARAM_INCORRECT	- Parameter was incorrect.
R_DISCOM_ERR_NOT_ACCEPTABLE	- A function was called in an incorrect state.
R_DISCOM_ERR_FATAL_OS	- Fatal error has occurred at OS interface.

**Description**

This function gets the current value of the CRC code.

The current value of the CRC code can be got after the end of the valid period of Display area.

See RH850/D1L/D1M Group User's Manual: Hardware for the detail about the timing of CRC calculation.

If the function successfully executes, the return code will be R\_DISCOM\_ERR\_OK.

**Reentrancy**

Reentrant.

**Sync/Async**

Synchronous

**Call from Interrupt**

Permitted.

### Preconditions

See [Table 3-5](#) about DISCOM unit status conditions.

### See also

r\_discom\_Error\_t

#### Function Prototypes

```
const uint8_t *R_DISCOM_VersionStringGet(void)
```

#### Input Parameter

None

#### Input-Output Parameter

None

#### Output Parameter

None

#### Return Codes

Version string.

#### Description

This function returns version string of the DISCOM driver.

#### Reentrancy

Reentrant.

#### Sync/Async

Synchronous

#### Call from Interrupt

Prohibited.

#### Preconditions

See [Table 3-5](#) about DISCOM unit status conditions.

None

**5.2.1.12 R\_DISCOM\_MacroVersionGet****Function Prototypes**

```
r_discom_Error_t R_DISCOM_MacroVersionGet(uint32_t *const Major,  
                                           uint32_t *const Minor)
```

**Input Parameter**

None

**Input -Output Parameter**

None

**Output Parameter****Table 5-15 Output parameter of R\_DISCOM\_MacroVersionGet**

Parameter	Description
Major	The major version.
Minor	The minor version.

**Return Codes**

R_DISCOM_ERR_OK	- No error has occurred.
R_DISCOM_ERR_PARAM_INCORRECT	- Either parameter Major or parameter Minor was R_NULL

**Description**

This function returns the major and minor version of the H/W macro.  
If a callback function is installed with the R\_DISCOM\_ErrorCallbackSet function, errors is notified to Unit0.

**Reentrancy**

Reentrant.

**Sync/Async**

Synchronous

**Call from Interrupt**

Prohibited.

**Preconditions**See [Table 3-5](#) about DISCOM unit status conditions.**See also**

r\_discom\_Error\_t

**5.2.2 Interrupt functions****5.2.2.1 R\_DISCOM\_IntEnable****Function Prototypes**

```
r_discom_Error_t R_DISCOM_IntEnable(const uint32_t Unit)
```

**Input Parameter****Table 5-16 Input parameter of R\_DISCOM\_IntEnable**

Parameter	Description
Unit	Specifies the DISCOM unit number.

**Input-Output Parameter**

None

**Output Parameter**

None

**Return Codes**

R_DISCOM_ERR_OK	- No error occurred.
R_DISCOM_ERR_RANGE_UNIT	- The unit-number was outside the range.
R_DISCOM_ERR_PARAM_INCORRECT	- Parameter was incorrect.
R_DISCOM_ERR_NOT_ACCEPTABLE	- A function was called in an incorrect state.
R_DISCOM_ERR_FATAL_OS	- Fatal error has occurred at OS interface.

**Description**

This function enables DISCOM interrupt.

If the function successfully executes, the return code will be R\_DISCOM\_ERR\_OK.

**Reentrancy**

Non-reentrant as default.

If user implements following functions to prevent multiple executions, this function will become re-entrant.

- R\_DISCOM\_Sys\_Lock
- R\_DISCOM\_Sys\_Unlock

**Sync/Async**

Synchronous

**Call from Interrupt**

Prohibited.

## 6.Types

### 6.1 Basic Types

This section shows the basic types used on this library.

**Table 6-1 Basic type**

Types	Definition		Basic types
char_t	typedef char	char_t	signed char
int8_t	typedef signed char	int8_t	signed char
int16_t	typedef signed short	int16_t	signed short
int32_t	typedef signed int	int32_t	signed int
int64_t	typedef signed long long	int64_t	signed long long
uint8_t	typedef unsigned char	uint8_t	unsigned char
uint16_t	typedef unsigned short	uint16_t	unsigned short
uint32_t	typedef unsigned int	uint32_t	unsigned int
uint64_t	typedef unsigned long long	uint64_t	unsigned long long
float32_t	typedef float	float32_t	float
float64_t	typedef double	float64_t	double

### 6.2 Definition

This section shows the definitions used in DISCOM API.

#### 6.2.1 API Version

This constant is the value which shows the version information of the VOCA driver.

**Table 6-2 Definition of DISCOM API**

Name	Description
R_DISCOM_VERSION_HI	MSB byte of the version information. It is major version information. This value is changed with release version.
R_DISCOM_VERSION_LO	LSB byte of the version information. It is miner version information. This value is changed with release version.

#### 6.2.2 Comparison period

This constant is the value which shows the Display Output comparison period.

**Table 6-3 Definition of Display Output comparison period**

Name	Description
R_DISCOM_PERIOD_FRAME	Flame CRC calculation period.
R_DISCOM_PERIOD_VBLANK	Vertical blanking period.

## 6.3 Enumerated Type

This section shows the enumerated types used in DISCOM API Function.

### 6.3.1 r\_discom\_Error\_t

#### Description

DISCOM driver error code.

If an error occurs, these enumerations give information about the reason.

#### Definition

```
typedef enum
{
    R_DISCOM_ERR_OK = 0,
    R_DISCOM_ERR_PARAM_INCORRECT,
    R_DISCOM_ERR_RANGE_UNIT,
    R_DISCOM_ERR_RANGE_PARAM,
    R_DISCOM_ERR_NOT_ACCEPTABLE,
    R_DISCOM_ERR_FATAL_OS,
    R_DISCOM_ERR_FATAL_HW,
    R_DISMIM_ERR_LAST
} r_discom_Error_t;
```

Table 6-4 Enumerator of r\_discom\_Error\_t

Name	Description
R_DISCOM_ERR_OK	No error occurred.
R_DISCOM_ERR_PARAM_INCORRECT	A parameter provided to a function was incorrect.
R_DISCOM_ERR_RANGE_UNIT	The unit-number was outside the range.
R_DISCOM_ERR_RANGE_PARAM	Parameter is the outside the range.
R_DISCOM_ERR_NOT_ACCEPTABLE	A function was called in an incorrect state.
R_DISCOM_ERR_FATAL_OS	Fatal error has occurred at OS interface.
R_DISCOM_ERR_FATAL_HW	Fatal error has occurred at H/W.

#### See also

None

**6.3.2 r\_discom\_Alpha\_t****Description**

The alpha value which is used for CRC code comparison.

**Definition**

```
typedef enum
{
    R_DISCOM_ALPHA_DEFAULT = 0,
} r_discom_Alpha_t;
```

**Table 6-5 Enumerator of r\_discom\_Alpha\_t**

Name	Description
R_DISCOM_ALPHA_DEFAULT	Display Out Comparison default alpha value use

**See also**

None

## 6.4 Structure Type

This section shows the structure used in DISCOM API Function.

### 6.4.1 r\_discom\_Param\_t

#### Description

The type describes the DISCOM configuration parameter information.

#### Definition

```
typedef struct
{
    uint16_t HOffset;
    uint16_t VOffset;
    uint16_t HSize;
    uint16_t VSize;
    r_discom_Alpha_t AlphaMode;
    uint8_t Alpha;
} r_discom_Param_t;
```

**Table 6-6 Member of r\_discom\_Param\_t**

Name	Description
HOffset	Horizontal start position of the rectangular area for which the CRC code is calculated. Range is 0 – 1279. Horizontal start position value should be smaller than 'ScreenWidth'. 'ScreenWidth' is the parameter of R_VDCE_DisplayTimingSet function. See 'RH850/D1x Family Renesas Graphics Library Video Data Controller E (VDCE) Driver' specification.
VOffset	Vertical start position of the rectangular area for which the CRC code is calculated. Range is 0 – 1023. Vertical start position value should be smaller than 'ScreenHeight'. 'ScreenHeight' is the parameter of R_VDCE_DisplayTimingSet function. See 'RH850/D1x Family Renesas Graphics Library Video Data Controller E (VDCE) Driver' specification.
HSize	Horizontal size of the rectangular area for which the CRC code is calculated. Range is 1 – 1280. The value should be set as follows: 'ScreenWidth' >= HOffset+ HSize.
VSize	Vertical size of the rectangular area for which the CRC code is calculated. Range is 1 – 1024. The value should be set as follows: 'ScreenHeight' >= VOffset+ VSize.
AlphaMode	Alpha mode to use.
Alpha	Default alpha value. Specify only '0xFF'.

Revision History	Renesas Graphics Library Display Output Comparator (DISCOM) Driver  User's Manual: Software
------------------	--

Rev.	Date	Description	
		Page	Summary
0.1	Oct 11, 2019	-	First edition.
0.2	Nov 22, 2019	16	Added R_DISCOM_ERR_NOT_ACCEPTABLE to Return Codes.
		20	Added the const to arguments.
0.3	Dec 20, 2019	8	Changed "Executing" State transition for R_DISCOM_ParamSet.
		18, 30	Added argument.
		40	Added Definitions for display output comparison timing.
1.0	April 24,2020	9-11	Added traceability ID
